## Executive Summary

This study was prepared by JK Energy Consulting, LLC for the City of Wymore, Nebraska (City). The purpose of the study was to review the electric rates for the City and its electric utility (Utility) and ensure that electric rates are adequate to pay for projected expenses.

Based on the analysis completed, an 8.1\% increase in rates is recommended in FY 2024 and FY 2025. This increase is based on the need for additional revenue to cover increases in purchased power costs from the reduction of future power cost adjustment credits and ensure adequate revenue to fund the City's capital improvement program.

Of the projected revenue requirements, approximately $\$ 836,000$ (Table 3, Line 9) is for purchased power from Nebraska Public Power District (NPPD), including transmission service to deliver these purchases. This represents approximately $65 \%$ of projected revenue requirements. It is expected that purchased power costs will increase in the next two years as the Power Cost Adjustment (PCA) credit of approximately 0.6 cents $/ \mathrm{kWh}$ is reduced. There has been no indication from NPPD that the PCA credit will be continued or discontinued beyond 2024; however, it would be reasonable to assume it will be phased out over the next two years as general cost escalation occurs for all utilities, including NPPD.

By FY 2027, a cumulative rate increase of approximately $16.4 \%$ would be necessary to cover projected operating expenses (Table 1, Line 21). The analyses completed indicated that rate increases of approximately $8.1 \%$ in FY 2024, 8.0\% in FY 2025 and $1.0 \%$ in FY 2026 and FY 2027 would be necessary to cover projected expenses (Table 2, Line 6). These increases will be dependent on power supply and other cost increases. Inflationary pressures have caused cost increases for items like fuel and materials required to complete needed capital projects. Those cost increases will need to be passed through to customers.

The cost of service analysis was completed to assess the amount that each rate class should be paying compared to the revenue that is being collected from existing rates. In general, it appeared that future rate increases should be directed more toward all-electric rate classes and less toward residential and commercial rate classes (Table 5). Over the last 20 years, NPPD has reduced its rate differentials between the summer and winter season, which increases costs for all-electric customers and decreases the viability of separate rates for these customers. In addition, there is not currently a customer charge beyond the minimum bill. The cost of service indicated that the cost of serving a customer with no usage is more than $\$ 19 /$ month.

The purpose of rate design is to develop rates that reflect the cost of service and accomplish other goals established by the Utility. The cost of service analysis indicated that rate increases should be directed primarily at all-electric customers, both residential and commercial. Revenues for other rate classes tend to be consistent with or higher than
the cost of service. While all customers would receive a rate increase under the proposed rate structure, all-electric rates would increase more than other rate classes (Table 6). It is recommended that a transition plan to eliminate all-electric rates be implemented. The proposed rates provide an initial step in a process that may take multiple years. The City should consider closing all-electric rates to new customers since they collect less than the cost of service and are likely being phased out.

In addition, a customer charge would be implemented for all rate classes and the minimum bill would be eliminated. The proposed rate structure would reduce the number of energy blocks to two for each rate class, which is more consistent with industry trends towards simpler energy rate structures. The proposed changes are consistent with the cost of service analysis.

The rates are comparable to neighboring utilities after the proposed rate increases are taken into account and other factors such as lease payments and gross revenue taxes are included (Tables 9 and 10). Rates were compared to NPPD, Norris Public Power District and the cities of Beatrice and Falls City. These neighboring utilities are also experiencing power supply and operating cost increases, which will help keep the Utility's rates competitive with these neighboring utilities.

## Conclusions

The following conclusions were reached, based on the information provided and analyses completed:

1. The projected revenue requirement for FY 2022 was approximately $\$ 1.3$ million, including operating costs and capital improvements.
2. The largest component of the test year budget was purchased power expense, representing $65 \%$ of the projected test year budget.
3. Projected revenues from existing rates are approximately $\$ 1.2$ million.
4. Rate increases of $8.1 \%$ in FY 2024 and $8.0 \%$ in FY 2025 would be necessary to ensure sufficient revenue to cover projected expenses.
5. The cost of service analysis indicated that all-electric rates are collecting far less than the cost of service.
6. The existing energy block structure is complicated and inconsistent with current industry trends.
7. The City does not currently collect a customer charge. While there is a minimum bill, it is inadequate to cover the cost of service for a customer that uses little or no energy.
8. With the proposed rate increase in April 2024, the Utility's rates will be comparable to neighboring utilities when lease payments and gross revenue taxes are taken into account.

Cost of Service Study
Page 3

## Recommendations

The following recommendations were developed based on the analyses completed and conclusions reached:

1. The City should adopt retail rate increases of $8.1 \%$ on April 1, 2024 and $8.0 \%$ on April 1, 2025. The proposed rate increases would be implemented with the rate ordinance included in Appendix A.
2. Rates should be increased for all rate classes but directed more at all-electric rates than other rate classes.
3. The City should consider closing the all-electric rates to new customers since they may be phased out and are collecting less than the cost of service.
4. The City should review its rates on a regular basis, particularly as purchased power and other operating costs increase.

## Purpose and Approach

The purpose of this study was to review the electrical rates charged by the Utility and develop rates that were consistent with a number of goals established by the Utility. The rate goals established by the Utility included having rates that provide sufficient revenues to cover projected operating expenses and having rates that reflect the cost of service for each rate class.

The approach to the study involved completing several tasks. Retail sales, purchased power, operating expenses, capital project, and financial information was collected. Test year expenses for FY 2024 were projected and future revenues and expenses were projected through FY 2027. A rate plan was developed to meet the financial goals established by the Utility. The allocated cost of service for each rate class was calculated and compared to revenue from existing rates. Rates for each rate class were developed based on the cost of service and other goals established by the Utility. A rate ordinance was developed. A written report was prepared and presented to the City Council on February 6, 2024. The City Council deferred action on the ordinance until a later date.

## Background

## City of Wymore - Electric Utility

The City operates its electric utility, which serves customers located within the City and in some areas adjacent to the City. The Utility serves approximately 800 customers, including a mix of residential and commercial customers.

City of Wymore
Cost of Service Study
Page 4

## Purchased Power

The Utility purchases its total electric requirements from NPPD. NPPD supplies the Utility's capacity and energy requirements under a long-term purchase arrangement. In FY 2024, the projected cost of purchased power from NPPD is $6.9 \phi / \mathrm{kWh}$, delivered to the Utility. Any retail rate component that is less than $6.9 \phi / \mathrm{kWh}$ would result in net losses from sales to that customer.

NPPD is planning stable rates for the foreseeable future, although the elimination of the PCA, which has provided credits to all wholesale customers for the last several years, may result in higher costs to the Utility. Future retail rate increases will be highly dependent on rate increases implemented by NPPD. Purchased power represents approximately $65 \%$ of the Utility's test year budget, so any increase in power costs will most likely require a rate increase at the retail level. There is also future power cost uncertainty related to the need for capacity additions on the NPPD system, changes in policies of the Southwest Power Pool related to cost allocation and resource adequacy, and legislation at the state and Federal level. These issues could result in a major change in the Utility's future power costs and should be monitored because of their potential impact on the Utility's retail rates.

## Projected Financial Results

The purpose of preparing projected financial results is to compare projected revenues with projected expenses and determine the need for future rate increases. Projections were prepared for the period FY 2024 through FY 2027 based on information provided by NPPD and the Utility.

## Parameters

The following parameters were used to develop the projected financial results:

- Historical and projected results were prepared based on the Utility's fiscal year (October through September).
- The FY 2024 budget was used as the basis for the test year budget.
- NPPD rates were projected to remain stable during the study period, with the exception of the phase-out of the PCA credit beginning in FY 2025.
- A capital improvement budget of $\$ 200,000$ per year was included.
- Operating and maintenance expenses, administrative costs, and other internal expenses were projected to increase at a rate of $3 \%$ annually.
- Projected financial results were presented on a "cash basis" as opposed to "accrual basis." Cash basis accounting includes capital improvements and debt service principal as expenses but does not include depreciation expense.

## Projected Financial Results

Table 1 (see page 7) shows the projected financial results for FY 2023 through FY 2027 along with historical financial results for FY 2021 and FY 2022. The projected financial results do not include rate increases. On a cash basis, the deficit in FY 2024 is approximately $\$ 96,000$, increasing to approximately $\$ 198,000$ in FY 2027. The major cause of the increasing deficit is the funding of the City's capital improvement plan.

## Future Rate Changes

One of the rate design goals was to spread any major rate increases over a number of years. Table 2 (see page 8) shows projected financial results with rate increases of $8.1 \%$ in FY 2024 and $8.0 \%$ in FY 2025. The proposed rate changes provide sufficient revenue to cover projected purchased power, operating and maintenance, administrative and general costs, and the Utility's proposed capital improvement budget.

## Cost of Service

The purpose of the cost of service analysis is to identify the costs related to serving each class of customers. Several steps were completed to prepare the cost of service analysis. A test year budget was prepared based on the FY 2024 operating budget with adjustments for known changes. Each expense item was identified and assigned to a utility function, and further classified as a demand, energy or customer related expense. This process is called "functionalization" and "classification." The costs related to each function are then allocated to each customer class based on generally accepted cost allocation principles for municipal electric utilities. The allocated costs were compared to revenues based on existing rates. The comparison of the cost of service to revenue from existing rates was used as a factor in designing rates.

City of Wymore

## Test Year Budget

The FY 2024 operating budget was used as the basis for the test year budget. The purpose of preparing a test year budget is to create a scenario that is as close to "normal" operating conditions as possible, reflecting known changes for the utility. The test year budget included the following adjustments to the FY 2024 operating budget:

1. Actual NPPD rates, as proposed for February 1, 2024, were used to calculate projected power costs.
2. A capital improvement budget of $\$ 200,000$ was include in the test year budget.
3. Revenues based on actual retail sales for the period October 2022 through September 2023 were used to calculate revenues based on "existing rates" for the FY 2024 test year budget.
4. A revenue requirement adjustment was included to result in an $8 \%$ overall rate change.

The test year budget for FY 2024 was approximately $\$ 1.3$ million and is summarized in Table 3. This figure represents the amount that needs to be collected from retail rates. It includes all operating expenses and is reduced for revenue from interest income and other non-retail revenue.

City of Wymore

## Functionalization and Classification

Functionalization and classification involved assigning the expense items to a function and classifying those expenses by allocation method. Functions vary by utility and are based on power supply arrangements, size and type of utility. The following functions were used for the Utility:

- Purchased power
- Transmission and sub-transmission service
- Distribution (primary and secondary)
- Services
- Meter reading
- Billing and customer accounting

Expenses were classified into demand-related, energy-related, and customer-related classifications. Some costs are allocated solely to a single classification. For example, transmission service is classified as demand related. Other functions, including primary distribution, are spread between the demand-related and customer-related classifications. The classifications were based on cost causation and how the costs should be recovered from the Utility's retail rate classes.

Table 4 (see page 11) summarizes the classification of test year expenses, including the allocation to the various retail rate classes. Approximately $\$ 187,000$ is customer-related, $\$ 291,000$ is energy-related, and $\$ 825,000$ is demand-related expense. Based on this classification, $14.3 \%$ of the Utility's test year budget is customer-related, $22.3 \%$ is energyrelated, and $63.3 \%$ is demand-related.

Of note, the cost of service for customer-related service is $\$ 19.12$ per month for residential rates. This compares to a minimum charge of $\$ 10.00$ per month that may include some energy consumption. It is recommended that the minimum charge be replaced with a monthly customer charge to reflect the cost of service. Over time, the customer charge should be increased to more closely reflect the cost of service.

| 10 | Percentage |  | 14.3\% |  |  |  | 22.3\% |  |  | 63.3\% |  |

## Cost Allocation

The functionalized costs were allocated to the various rate classes using generally accepted methods for preparing embedded cost of service studies. There is no standard cost of service methodology set by a regulatory agency that the Utility is required to follow. There are a number of guidelines that municipal utilities typically follow, including publications and guidelines from the American Public Power Association, the National Association of Regulatory Utility Commissioners, and the Federal Energy Regulatory Commission.

Demand-related costs were allocated on the basis of coincident or non-coincident demands, depending on the function, and adjusted for losses. Energy-related costs were allocated on the basis of energy sales, adjusted for losses. Customer-related costs were allocated on the basis of the weighted number of customers within each rate class, with weighting factors determined based on the cost of metering, customer billing or services.

Some expenses are not easily assigned to a particular function. Examples of expenses that are not easily assigned include interest income, general administrative expenses, and miscellaneous operating revenue. These expenses were assigned to functions at the same ratio as expenses that were directly assigned to functions, which is one of several generally accepted methods for assigning these costs to the appropriate function.

## Comparison of Revenues to Cost of Service

Revenues collected from existing rates were compared to the allocated cost of service. The purpose of this comparison was to provide guidance on the adequacy of existing rates for each rate class. This comparison can be used to assess the general magnitude of rate changes needed for each rate class and is one factor in determining the need for rate adjustments for individual rate classes.

City of Wymore
Cost of Service Study

Page 11

Table 5 compares the revenue from existing rates to the calculated cost of service. The most significant deviation is for residential and commercial all-electric customers, which would require rate increases of $40.3 \%$ to $47.6 \%$, respectively, to cover the cost of service. Residential and commercial rates appear to be collecting more revenue than the calculated cost of service.

Table 5
City of Wymore, NE 2024 Cost of Service Study Comparison of Cost of Service to Revenue from Existing Rates

Annual

| Line | Rate Class | Revenue Existing Rates |  | Cost of Service |  | Difference |  |  |

## Rate Design

The purpose of rate design is to develop rates that help achieve established revenue and financial performance goals while balancing other rate goals established by the Utility. This process involves meeting goals that sometimes conflict with each other. For example, a goal to have competitive rates may conflict with the need to have rates that recover sufficient revenue to pay for projected expenses.

The rates were designed to best meet several goals that were established by the Utility and its consultant. These goals included:

- Ensuring the long-term financial integrity of the utility.
- Establishing rates that are fair, reasonable, and non-discriminatory.
- Developing rates that are competitive with neighboring utilities.
- Recognizing the cost of service for rate classes.

## Summary of Rate Design Changes

The proposed rate ordinance, included in Appendix A, implements a rate increase that increases overall revenue by approximately $8.1 \%$ on April 1, 2024, and $8.0 \%$ on April 1, 2025. The proposed rate changes are consistent with the cost of service results. The proposed rate changes by rate class, effective April 2024, are shown in Table 6 (see page 14). Table 7 (see page 15) shows the proposed rate increases broken out by summer and winter seasons. Table 8 (see page 16) shows the proposed rate changes by rate class for FY 2025, effective April 1, 2025.

The proposed changes to the rate design include:

1. Implement a monthly customer charge. Currently, the City assesses a minimum charge of $\$ 10.00$, which may include some energy. Minimum charges began being phased out in the industry in the 1990s because there is the potential for encouraging wasteful usage. If your usage is low enough that the minimum bill is triggered, you may use more energy since it is essentially free. It is proposed to implement a $\$ 10.00$ customer charge for residential customers in April 2024, increasing to $\$ 13.00$ in April 2025.
2. Begin phase-out of all-electric rates. The all-electric rates are much lower than the calculated cost of service. In recent years, NPPD has reduced the rate differential between the summer and winter seasons, which decreases the viability of all-electric rates. In addition, the current all-electric rate is lower in the summer season than the corresponding non-all-electric rate, which is not consistent with NPPD's cost structure. It is proposed to increase all-electric rates more than other rates in both summer and winter in an effort to eliminate these rate classes at some point in the future. Given that these rates collect far less revenue than the cost of service, the City should consider closing these rate classes to new customers.
3. Reduce the number of energy blocks. The current energy block structure is complicated and probably dates to a period when electric consumption was much lower. The rates send conflicting signals, first increasing and then decreasing. It is proposed to reduce the number of energy blocks for all rates to two. This simplification will make the phase out of all-electric rates simpler.
4. Eliminate the Temps Disposal rate class. It is proposed to move the customer under this rate class to the Commercial rate class. This customer class was set up outside the rate ordinance approximately 15 years ago to fund a capital project needed by the customer. The rate is unneeded now and this customer should be placed on the Commercial rate.
5. Add descriptions for each rate class. There is currently insufficient language to describe what qualifies a customer to take service under a given rate class. It is proposed that this language be incorporated into the next rate ordinance.

| 9 | Total | \$ | 1,303,137 | \$ | 1,407,549 | \$ | 104,413 | 8.0\% |

## Rate Comparisons

The proposed rates tend to be comparable to neighboring utilities when taking into account probable lease payments and gross revenue taxes. Rates were compared to NPPD, Norris PPD, and the cities of Beatrice and Falls City. Tables 9 and 10 (see page 16) compare residential and commercial rates at various usage levels for the summer and winter seasons.

Summer rates tend to be more competitive than winter rates and higher usage customers tend to have less competitive rates than lower usage customers. The City has a fairly flat load profile compared to neighboring utilities.

Rate comparisons do not take into account issues like general fund transfers or use of utility staff to provide discounted services to the City general fund. NPPD and Norris PPD do not provide transfers to City general funds where they provide service beyond the normal lease payment and a portion of the gross receipts tax paid to the taxing authority.

## Conclusions

The following conclusions were reached, based on the information provided and analyses completed:

1. The projected revenue requirement for FY 2022 was approximately $\$ 1.3$ million, including operating costs and capital improvements.
2. The largest component of the test year budget was purchased power expense, representing $65 \%$ of the projected test year budget.
3. Projected revenues from existing rates are approximately $\$ 1.2$ million.
4. Rate increases of $8.1 \%$ in FY 2024 and $8.0 \%$ in FY 2025 would be necessary to ensure sufficient revenue to cover projected expenses.
5. The cost of service analysis indicated that all-electric rates are collecting far less than the cost of service.
6. The existing energy block structure is complicated and inconsistent with current industry trends.
7. The City does not currently collect a customer charge. While there is a minimum bill, it is inadequate to cover the cost of service for a customer that uses little or no energy.
8. With the proposed rate increase in April 2024, the Utility's rates will be comparable to neighboring utilities when lease payments and gross revenue taxes are taken into account:

## Recommendations

The following recommendations were developed based on the analyses completed and conclusions reached:

1. The City should adopt retail rate increases of $8.1 \%$ on April 1, 2024 and $8.0 \%$ on April 1, 2025. The proposed rate increases would be implemented with the rate ordinance included in Appendix A.
2. Rates should be increased for all rate classes, but directed more at all-electric rates than other rate classes.
3. The City should consider closing the all-electric rates to new customers since they may be phased out and are collecting less than the cost of service.
4. The City should review its rates on a regular basis, particularly as purchased power and other operating costs increase.

City of Wymore

Appendix A - Rate Ordinance
$\qquad$

AN ORDINANCE TO AMEND PROVISIONS PERTAINING TO ELECTRIC RATES PAID BY CONSUMERS OF ELECTRIC SERVICE FROM THE ELECTRIC DISTRIBUTION SYSTEM; TO INCREASE RATES PAID BY CONSUMERS OF ELECTRIC SERVICE FROM THE ELECTRIC DISTRIBUTION SYSTEM; TO PROVIDE FOR THE REPEAL OF CONFLICTING ORDINANCES AND SECTIONS; TO PROVIDE FOR AN EFFECTIVE DATE.

BE IT ORDAINED BY THE MAYOR AND COUNCIL OF THE CITY OF WYMORE, NEBRASKA:

Section 1. That Chapter 3, Article 11, Section 31107 of the Municipal Code of Wymore, Nebraska, be amended to read as follows:
§3-1107 MUNICIPAL ELECTRIC SYSTEM; RATES. (1) The following is established as a minimum tariff of rates to consumers of electric service from the Electric Distribution System:

## A. Residential Service (RS-1)

Availability: Available to single family residential and individually metered apartments for domestic purposes, including space heating, when all services are supplied through a single meter and whose entire requirements are provided by the electric utility. Residential customers who use a majority of their total consumption for operation of a commercial or professional enterprise in connection with their residence shall be required to take service under Commercial Service (CS-1) or Commercial Service - All Electric (CS-1 WHSH) rate schedule. Not applicable to resale, stand-by or auxiliary service.

Character of Service: AC, 60 Hertz, single-phase, at any of the City's standard voltages where the service may be supplied by a single power transformation.

## Rates:

Effective Date:
Customer Charge, per month Energy Charge

Minimum Bill: The Customer Charge.

## B. Residential Service - All Electric (RS-1 WHSH)

Availability: Available to all customers taking service under the residential rate who have no natural gas or propane service or hookup to any appliance, furnace or water heater, provided they were taking service under this rate schedule as of February 1, 2024. Not applicable to resale, stand-by or auxiliary service. Not available to new customers.

Character of Service: AC, 60 Hertz, single-phase or three-phase, at any of the City's standard voltage where the service may be supplied by a single power transformation.

## F. Street Lights

Availability: To the City for municipal street lighting (dusk to daylight) from the electric department distribution system.

Character of Service: The electric department will construct, operate and maintain the complete system and furnish such lighting services every night from dusk until daylight or approximately 4,000 hours per annum.

## Rates:

Effective Date:
Energy Charge All kWh, per kWh

April 1, 2024 April 1, 2025
\$0.0567
$\$ 0.0612$

Minimum Bill: The Energy Charge plus the Production Cost Adjustment.
G. Non-Metered Rental Lights. Applicable to any rental lights that are not individually metered or part of the metered usage for a retail customer.

Rates:
Effective Date:
Customer Charge, per light fixture $\frac{\text { April 1, 2024 }}{\$ 10.00} \quad \frac{\text { April 1, } 2025}{\$ 13.00}$
H. Electric Heating Equipment. All customers taking service under all-electric rate schedules are subject to verification that they are using natural gas or propane for any appliances. Any customers taking natural gas or propane service for use in any appliance is subject to removal from the applicable allelectric rate.
I. Production Cost Adjustment (PCA). There shall be applied to each monthly electric bill to consumers of electric service from the Electric Distribution System of the City any Production Cost Adjustment charges included in the monthly billings to the City for electric power from Nebraska Public Power District (NPPD) under the Wholesale Power Contract between NPPD and the City. The monthly energy rate of each consumer shall be increased an amount equal to the NPPD Production Cost Adjustment, as expressed in $\$ / k W h$. Any Production Cost Adjustment credit received from NPPD will not be applied to consumer bills without approval of the City Council.
J. Contributions in Aid of Construction. Consumers who make contributions in aid of construction are eligible for consumer credits in accordance with the Contribution in Aid of Construction and Consumer Credits policy adopted by the Governing Body.
K. Billing. Bills for electricity consumed shall be prepared for each consumer based on the rates herein set forth. The amount owing by each consumer and thus computed shall be called the "net" bill and must be paid within eighteen (18) days after its due date. If the "net" bill is not paid within eighteen (18) days after the due date, the consumer will be required to pay a penalty of ten percent (10\%) thereof which shall be added to the "net" bill and shall be called the "gross" bill.
L. Effective Date. The minimum tariff of rates established by this section shall be effective beginning with the billing cycle for February/March 2024. (Amended by Ord. Nos. 246, 8/16/1972; 264, 12/3/1975; 320, 10/3/1979; 346, 2/3/1982; 448, 9/5/1990; 507, 3/6/1996; 545, 2/7/2001; 561, 3/3/2004; 585, 2/7/2007; 592, 4/16/2008; 598, 6/17/2009, 607, 10/6/2010; 614, 9/21/2011, 623, 5/15/2013; 627, 9/18/2013; 637, 2/4/2015).

Section 2. That any other ordinance or section passed and approved prior to passage, approval and publication or posting of this ordinance and in conflict with its provisions, is hereby repealed.

Section 3. This ordinance shall take effect and be in full force from and after its passage, approval and publication or posting as required by law.

PASSED AND APPROVED this $\qquad$ day of $\qquad$ 2024.

Collin Meints, Mayor
